

DESIGN

Michael Kilbey Associates offer a complete cladding, curtain walling and roofing service to the commercial market. Independent of any contractor or manufacturer, we are uniquely positioned to help you choose the right product and then to create the solution to your specific structural needs.

Our experienced designers have extensive knowledge of the range of cladding, curtain walling and roofing systems available today and will work closely with you from the start of each assignment to produce detailed CAD drawings ready for construction. We have worked on a number of landmark projects for many substantial clients, including Marks & Spencer, Cadbury Schweppes, Berkeley Homes Ltd and Tottenham Hotspur Football Club.

In-house structural engineers carry out calculations in relation to structural and wind loadings, thermal and acoustic properties and drainage calculations, ensuring that your project meets with current British and EU Standards and the manufacturers' recommendations.

Our depth of knowledge and considerable experience means that we can design the visual and functional aspects of the roof and façade construction on any project. From steel structure to final fixing, you can be sure of our attention to every detail.
